

Having listened to the brief by the Executive Director of the agency and asked a few questions of mine, I decided to make use of the following to come up with a solution to her challenge:

1, A dataset on Security in Nigeria from a report by [The Council on Foreign Relations](#) will be used to ascertain safety of the proposed location

```
[9]: csv_path = 'Casualties_by_state.csv'
df = pd.read_csv(csv_path)
```

```
[10]: df.head()
```

```
[10]:
```

	State1	Latitude (generated)	Longitude (generated)	Total Deaths
0	Zamfara	12.0229	6.0466	2417
1	Yobe	11.9917	11.5187	2684
2	Taraba	8.0608	10.3808	1405
3	Tahoua	NaN	NaN	38
4	Sokoto	12.7331	5.2277	140

2, Putting to good use the Foursquare Location data, I will be able to find the perfect social spot for this clients.
